

Hierarchical Skinny Gibbs Sampler in Logistic Regression Using Polya–Gamma Latent Variables

03/30/2025

The “H_SGPG.R” is an R file for running Hierarchical Skinny Gibbs with Polya_Gamma.

The “H_EGPG.R” is an R file for running Hierarchical Exact Gibbs with Polya_Gamma.

The “evaluation.R” is an R file for with functions of the metrics use in the simulation analysis.

The “Simulation.R” is an R file for with simulating high dimensional logistic Data.

The “Modelfitting.R” is an R file running the simulation analysis..

Steps to replicate simulation analysis:

Step 1. Run SIM_DATA.R to simulation the data.

Step 2. Run Main.R for consistent and scalable variable selection in probit regression under continuous spike and slab priors.
